

The Curotto system can be purchased with new trucks or retrofitted to existing units.

The Curotto-Can II
patent # 5,639,201

ONE SYSTEM DOES IT ALL!

PRODUCTIVITY
The Curotto Can has the highest productivity of any automated system. A four second "pickup-dump-return" cycle minimizes the time spent doing cart pickup. The high carrying capacity of a front loader minimizes the number of landfill trips. This unique combination results in the highest number of homes serviced per shift.

VERSATILITY
Instead of adding a new single purpose ASL to their fleets, haulers can, in about a minute, attach a Curotto Can onto the forks of a commercial front loader. That unit can now work residential routes. You gain more capacity than an ASL but with much lower startup costs. The route-proven design delivers the lowest maintenance costs of any automated system.

TAKE-ALL CAPACITY
The Curotto Can's take-all capability, an industry first, creates new opportunities for haulers. By using a beefy arm and lock sure grabbers the Curotto Can easily loads large items such as armchairs, washing machines, etc. into the can.

Simply put - Curotto is the best all round automated system.
