

## **IMPORTANT NOTE**

On the next two pages (17 and 17a), you will find the parts for the two Main Valves that have been used on the Curotto-Can.

Both valves are similar in size and shape, however, the components are not interchangeable. It is important when ordering parts for the Main Valves that you determine the manufacturer before ordering.

The manufacturer can be determined by inspecting the valve. The Rexroth valve will have 'REXROTH' clearly etched into the valve and will also have a plate attached with the serial number. In addition, the three control valves mounted on top of this valve will further identify it as a as Rexroth. (Page 17)

The other valve will have no significant identifier and the three control valves, mounted on top, will be identified as Northman. (Page 17a)

The Rexroth and Northman valves have different internal workings and, even though some parts may be interchangeable, the valve will not work properly with the wrong parts installed.
